

Metal Material Mastery

July 28, 2016

Richard Funnell

Topics

- **How Metals work**
- **Best practices for modeling**
- **KeyShot Material Properties:**
 - **Metal**
 - **Metallic Paint**
 - **Anisotropic**
- **Working with Textures**
 - **Brushed**
 - **Machined**
 - **Worn**
- **Lighting techniques for Metals**
 - **Tips & tricks**
- **Q & A**

Metal looks the way it does because of the specular color & what's reflected.

HDRI Environment

Polished Chrome

Textured Metal

**Material + Lighting
Environment = Result**

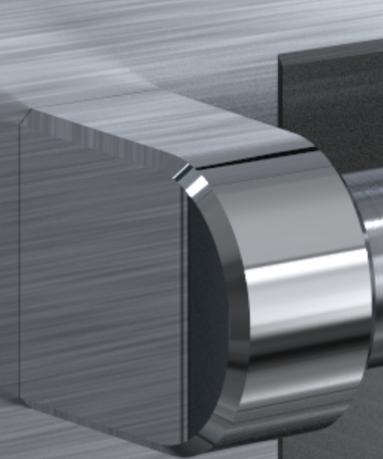

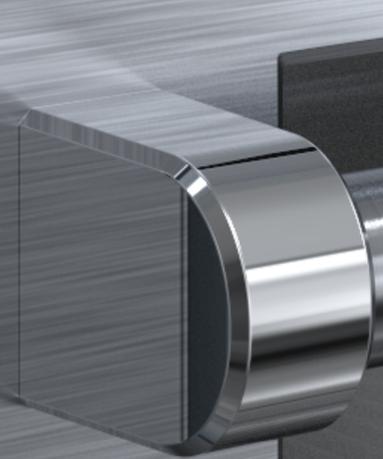

Geometry is still important

Rounded Corners

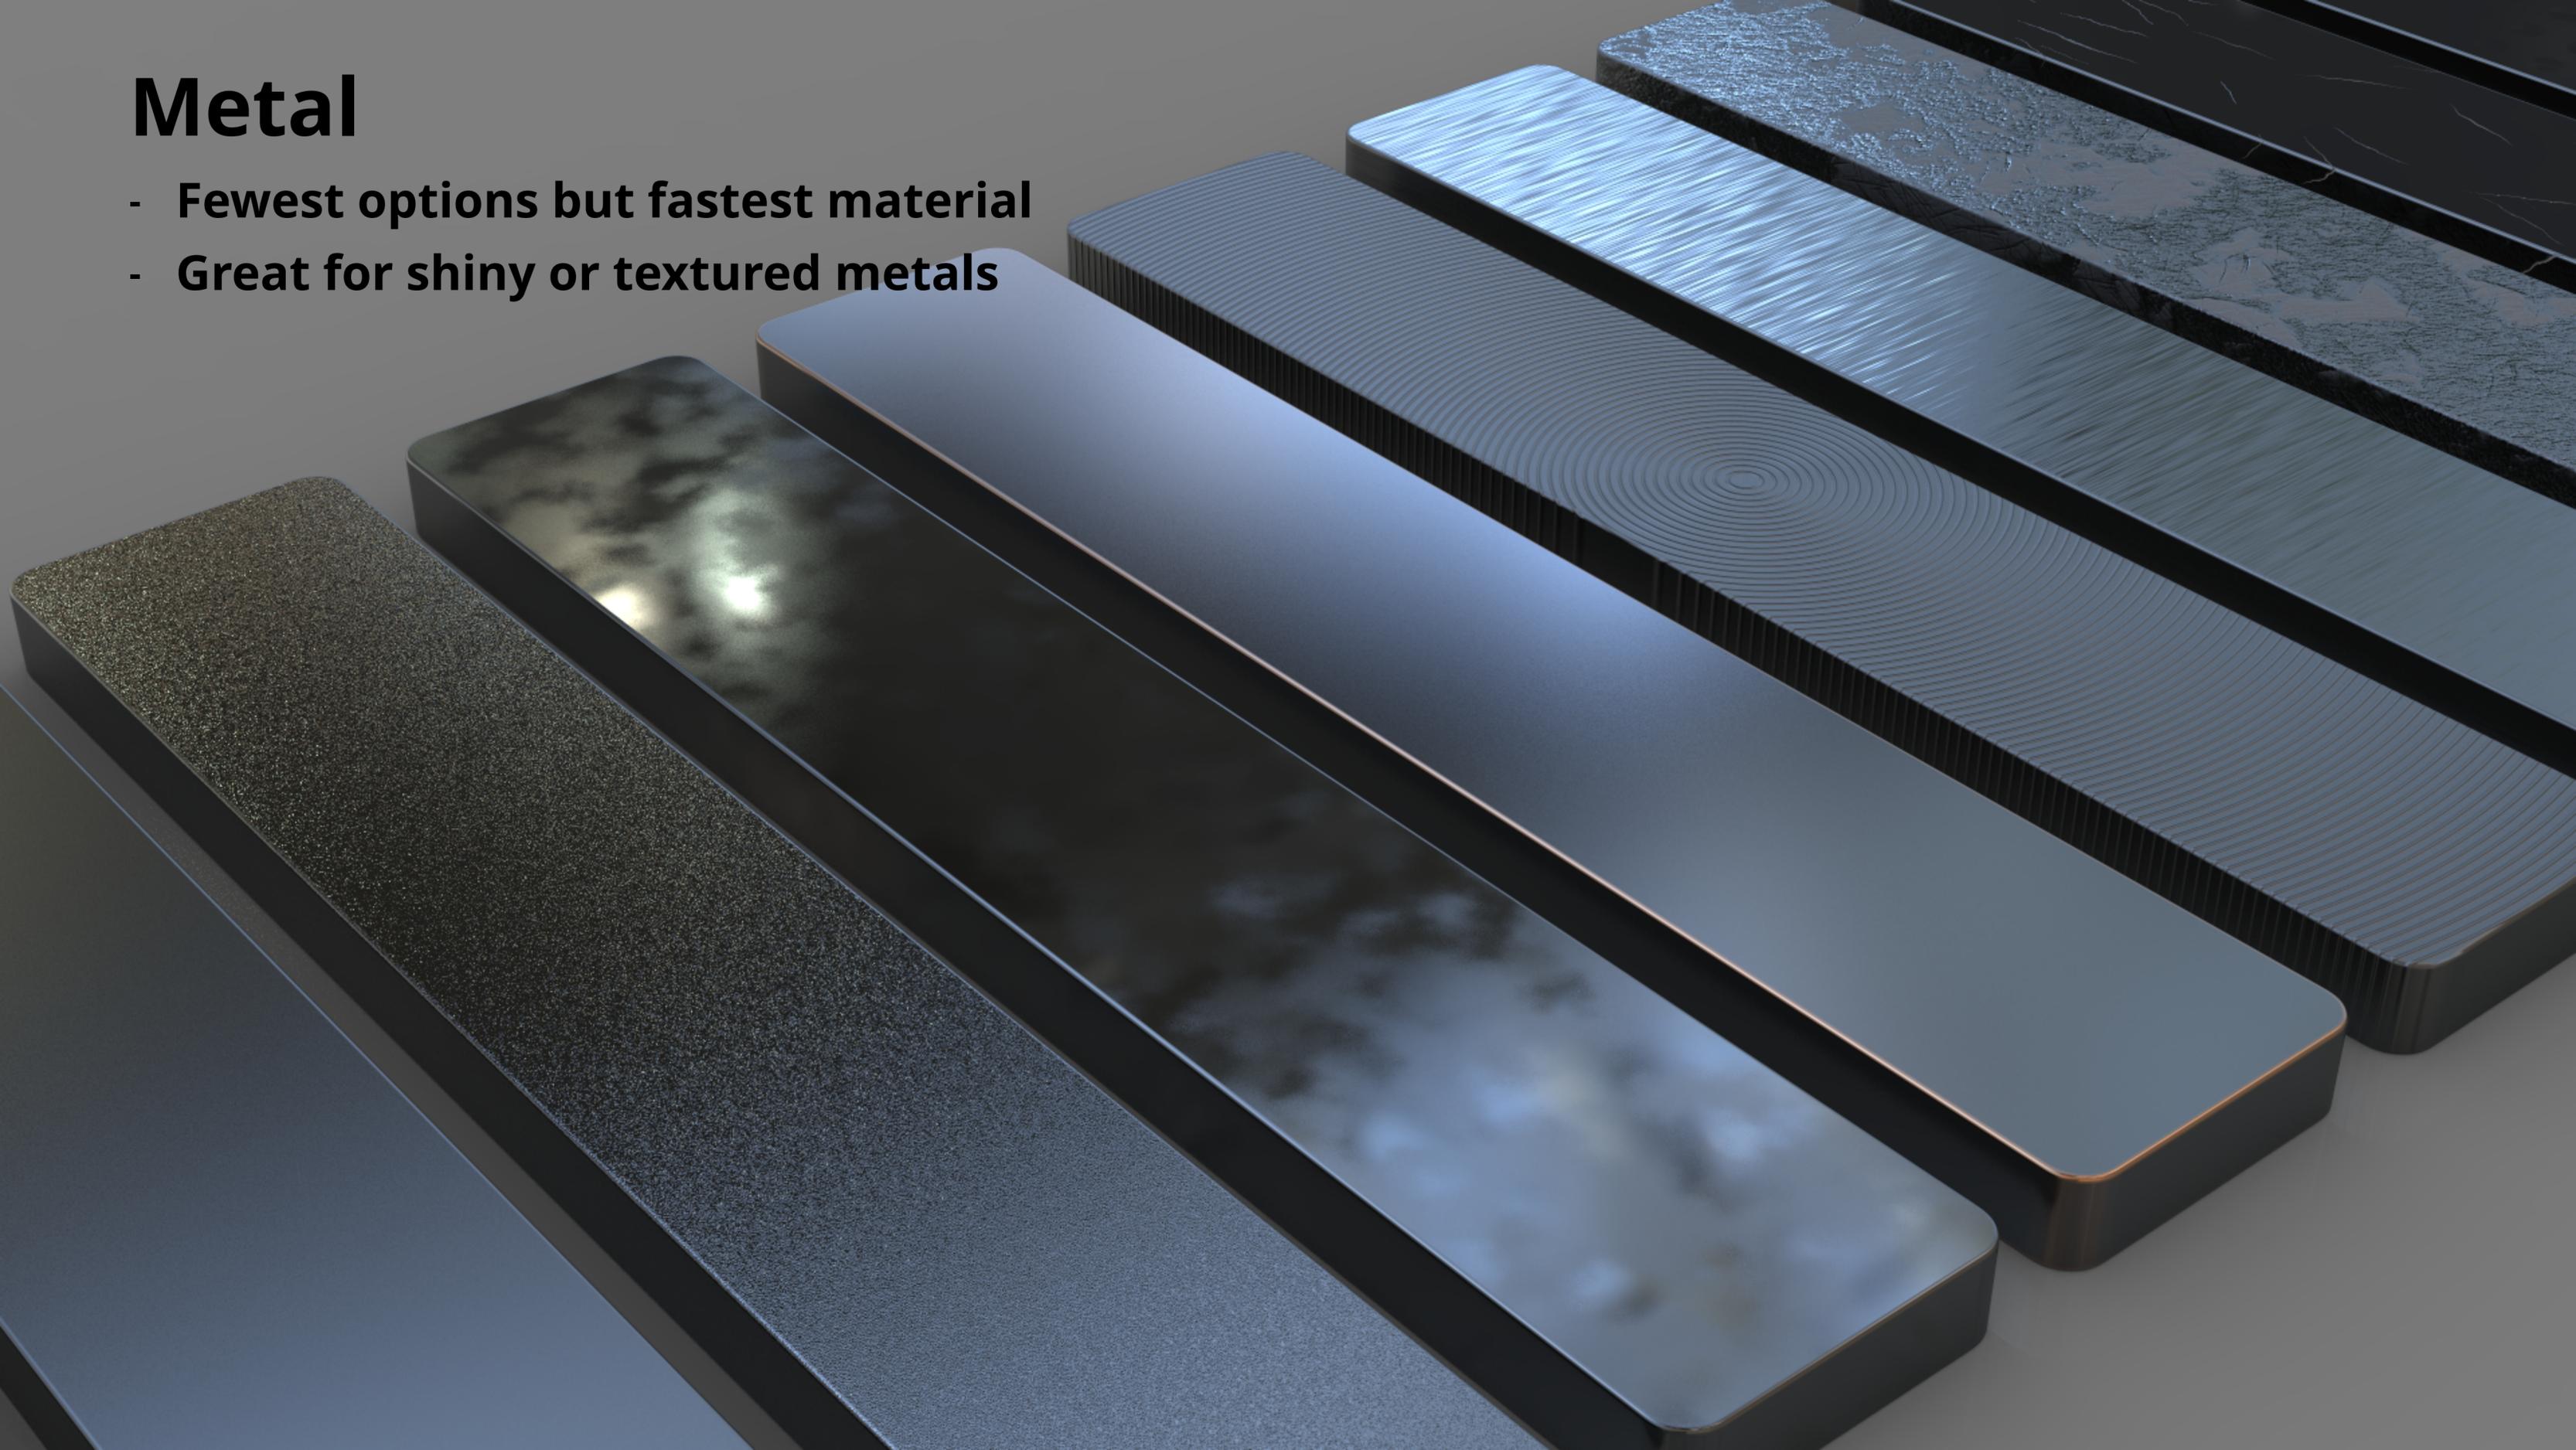

Sharp Corners

Material + **Lighting**
Environment = **Result**

Metal

- Fewest options but fastest material
- Great for shiny or textured metals

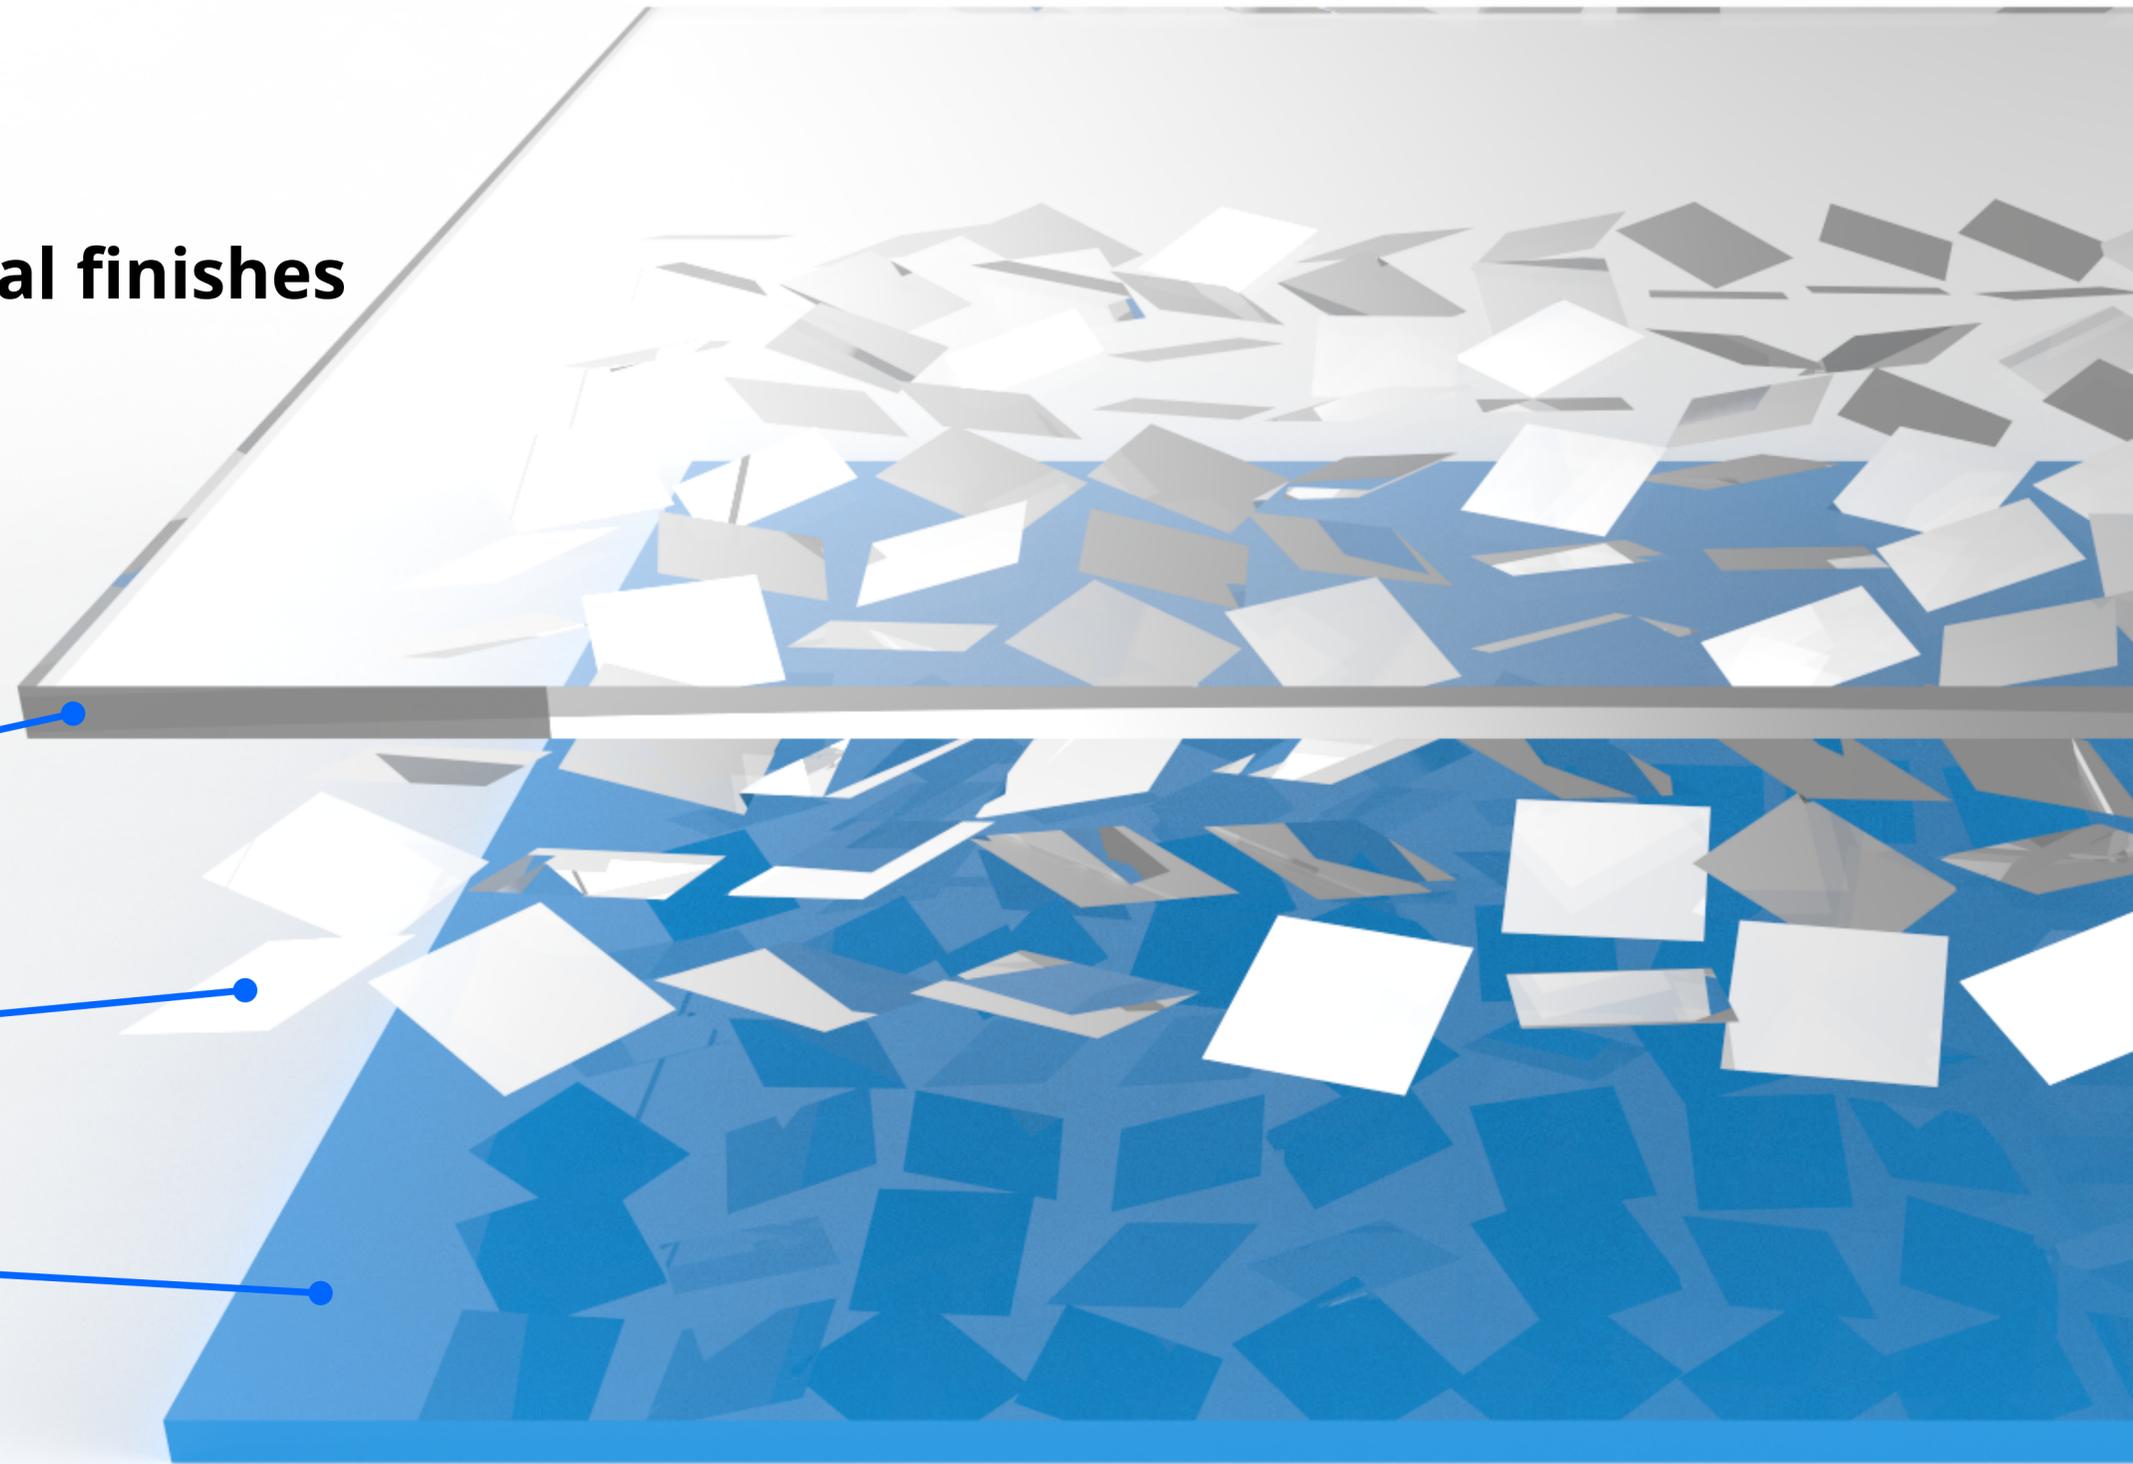

Metallic Paint

- More options & control
- Layered material
- Great for coated & faux metal finishes

Clear-coat

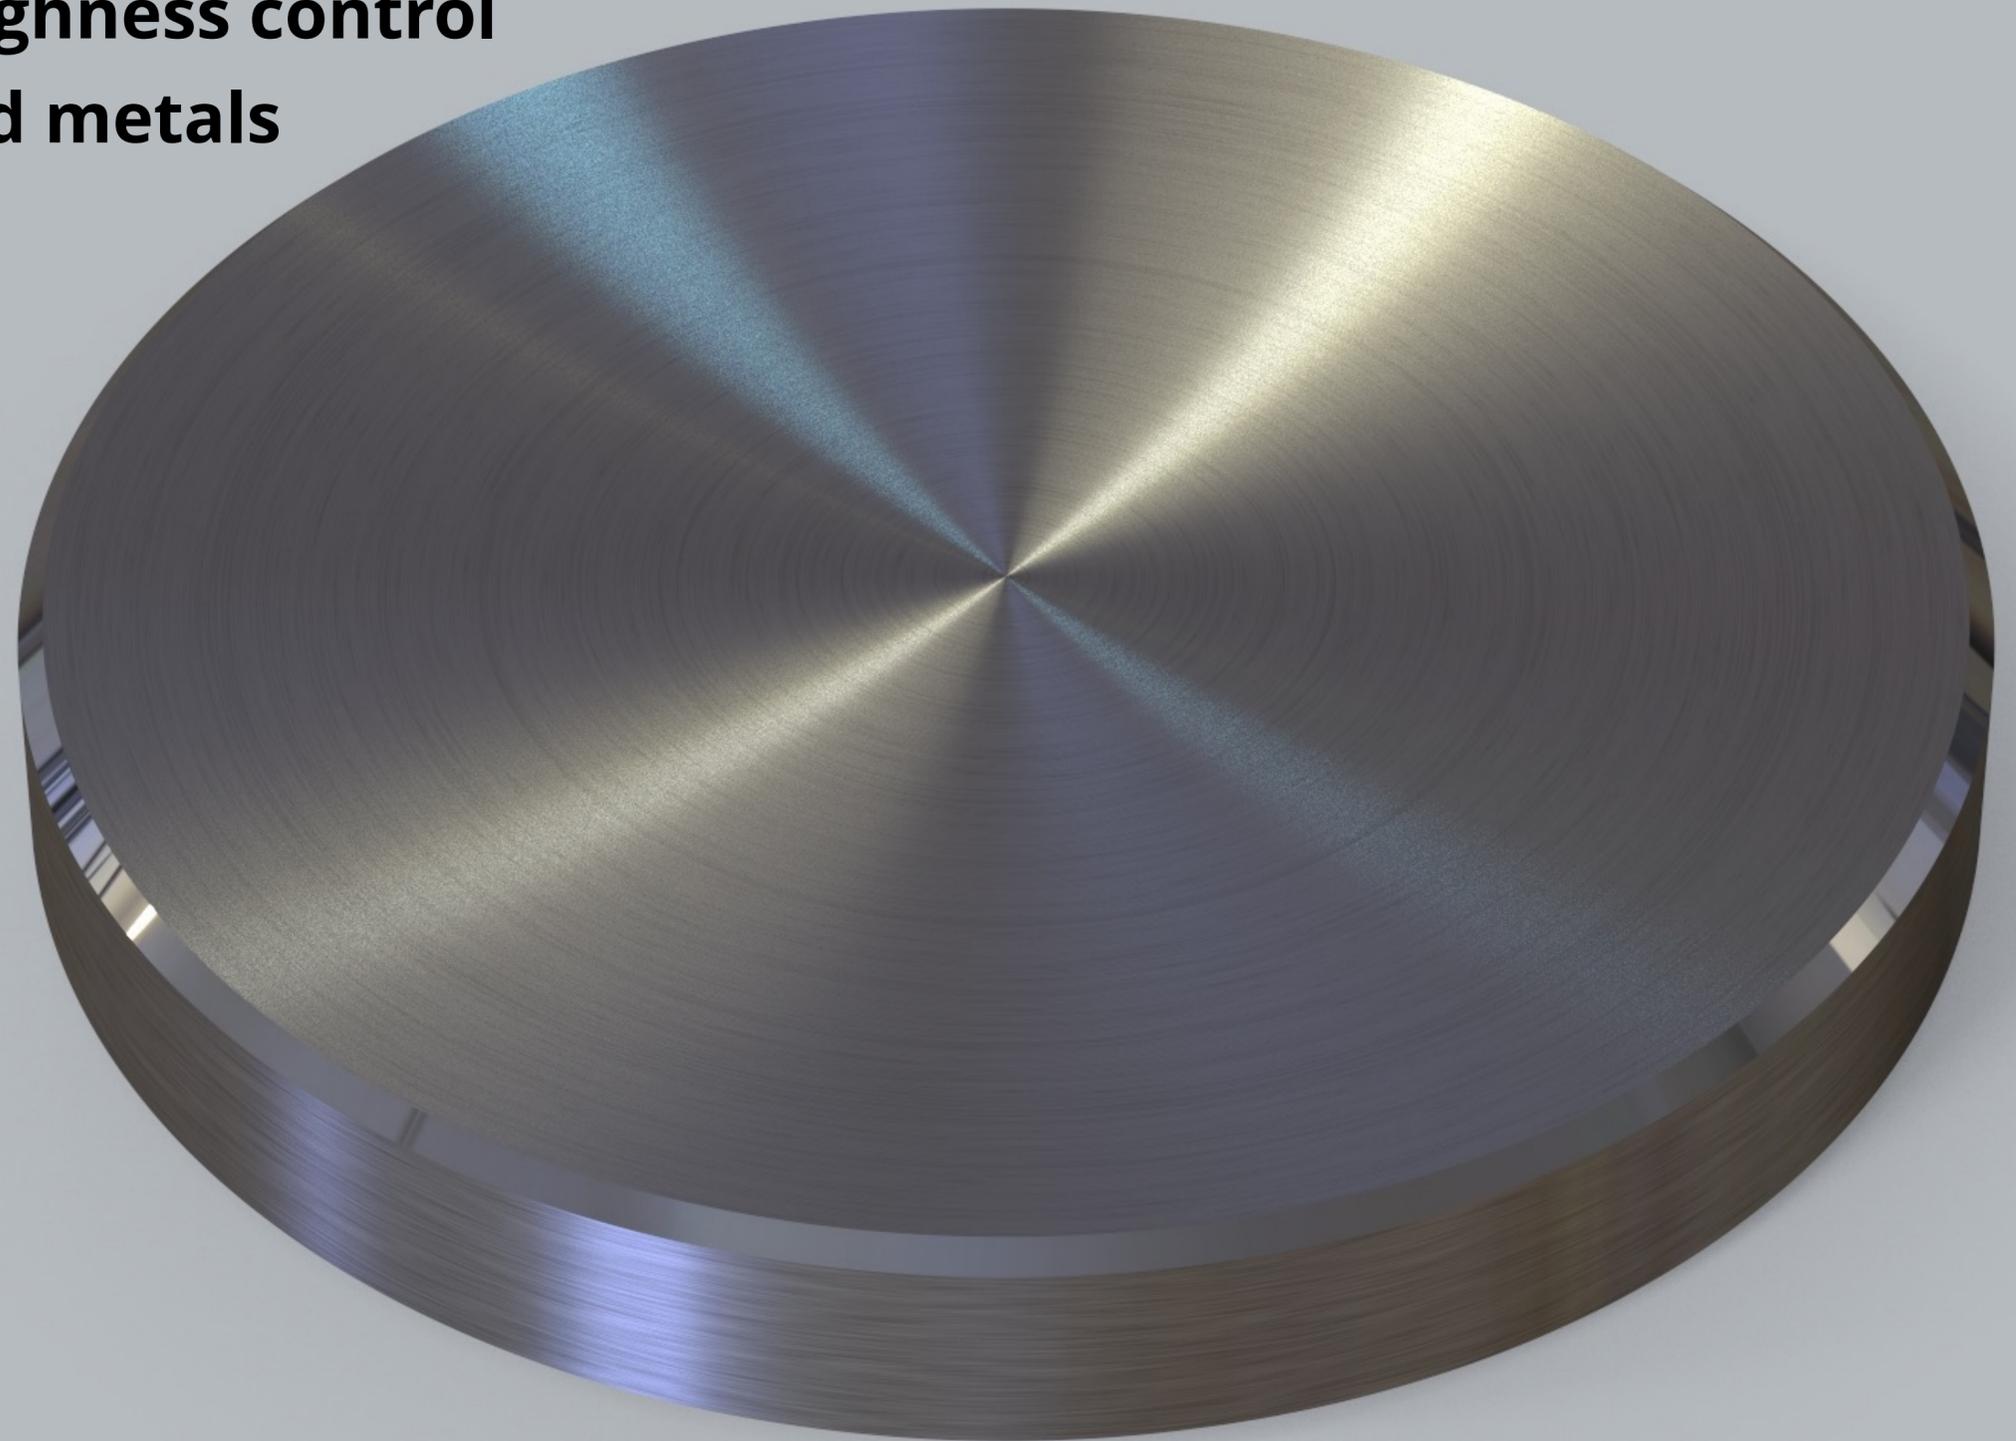

Metal Flake

Base Paint

Anisotropic (Advanced metal)

- **Most control over reflections**
- **Versatile due to X / Y roughness control**
- **Best material for brushed metals**

Material + **Lighting**
Environment = **Result**

**Same materials,
different environment**

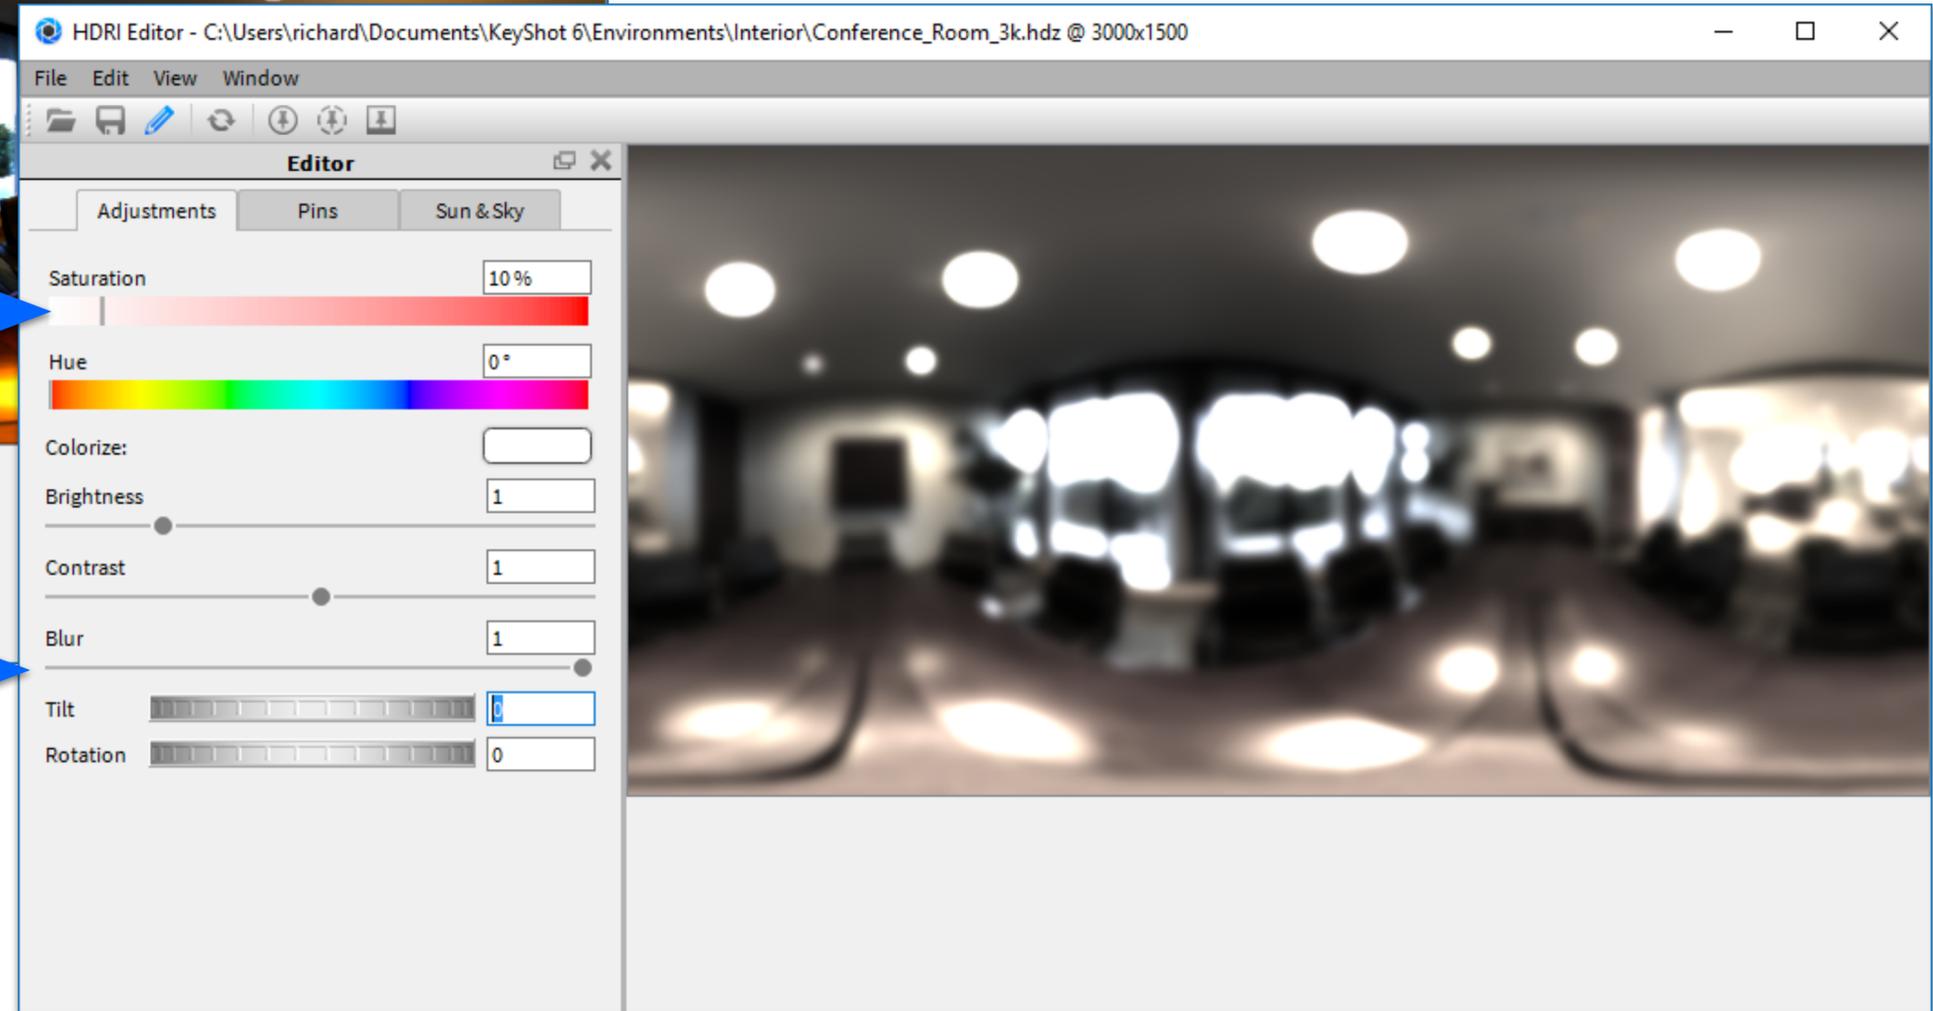

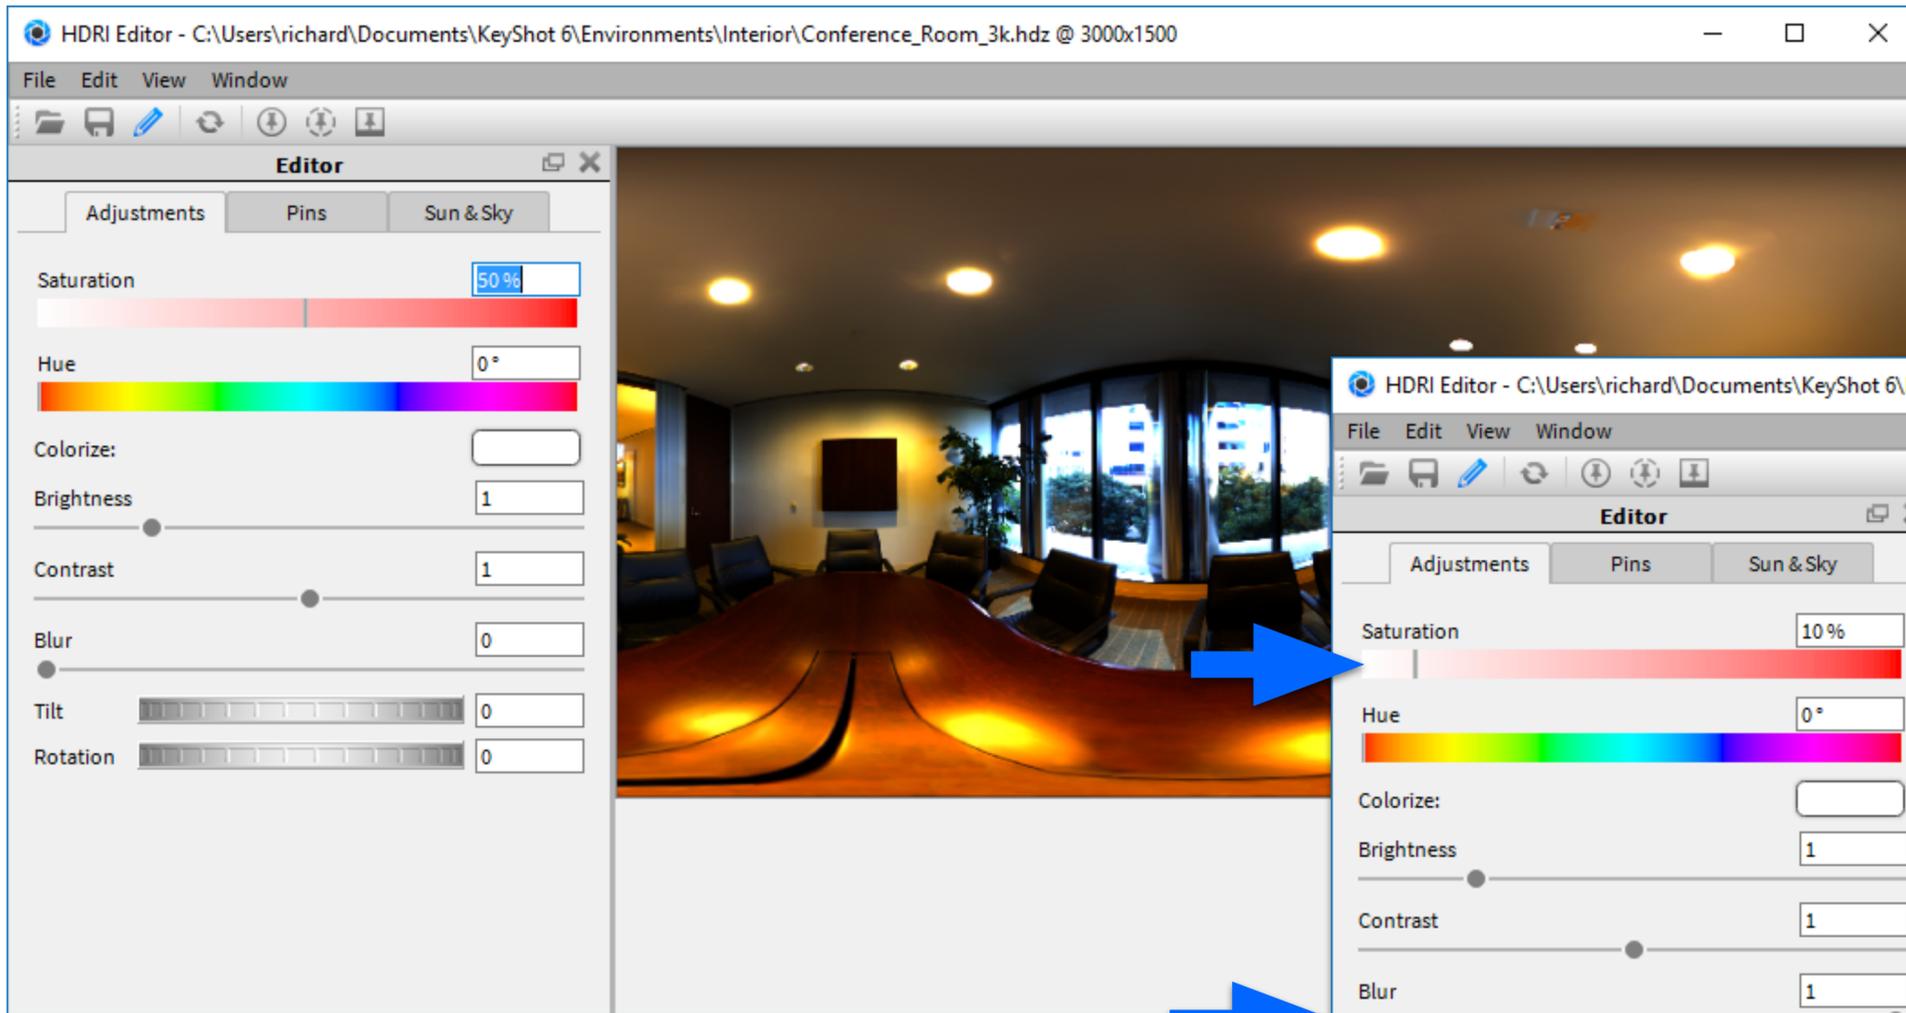

For rendering metals,
lighting is **equally**
important as
material settings.

With KeyShot Pro, the HDRI Editor enables full control over environment lighting.

Use pins to get perfect results

Desaturate & blur image-based HDRI's to quickly improve results

Material + **Lighting**
Environment = **Result**
